

Tutorial

Session 3: Creating a Slideshow in Album

One of the great features in Album is that you can take all those great images and make them into a slideshow. This slideshow can be saved and shared with anyone who has a computer.

Gather your images

- Select the images that you would like to use to make a slideshow by clicking each image while holding down the “shift” key.
- Click the Create tab on the top toolbar.
- Select slideshow from the menu on the left. Then click the Next button.
- Next, choose the Slideshow style from the left, and then click the next button.
- In the next window, you may add a title, how many photos will be on each page, music and the type of transitions between each slide. Then click next to continue.
- Then, add any additional photos that you would like to be in the slideshow. Click Next.
- In the next window, you can preview each slide, as it would appear in the show. Continue by clicking next.
- Finally, you can save the slideshow. First you should save the file as a PDF. This is a great file format for sharing with other people. Click the Save as a PDF... tab, and then save it to your hard drive.
- You will also save it within Album for future use. Click Done.

Things to Consider

Try to keep image size and quantity to a minimum when making PDF slideshows. This will make it easier to share with others. Take time to explore the other Creation tools for more imaging fun!
