Agricultural Science Center at Clovis, NM

Past accomplishments:
Future Goals:

- Prepare agriculture in the region for future climate.
- Increase sustainability and profitability of limited irrigated and dryland forage systems by adapting alternative crops and management options that farmers will readily utilize.
- Develop one or two high-yielding Valencia peanut cultivars that are efficient in water utilization, disease resistance, and high oleic to increase the shelf life of in-shell Valencia peanut.
- Continue addressing the needs of the dairy industry in the Southwest, as determined by producers and as needs arise.
