A Bibliography of Literature Related to Grazing Systems
A BIBLIOGRAPHY OF LITERATURE
RELATED TO GRAZING SYSTEMS

by

Christopher D. Allison
and
M. Karl Wood

Range Improvement Task Force
Agricultural Experiment Station
Cooperative Extension Service

Published and distributed in furtherance of the Acts of Congress of May 8 and June 30, 1914, by the Cooperative Extension Service of New Mexico State University, John W. Orens, director, and the U.S. Department of Agriculture, cooperating. New Mexico State University is an equal opportunity employer. All programs are available to everyone regardless of race, color, religion, sex, age, handicap, or national origin.

March 1981
Las Cruces, New Mexico
Controlled grazing of ranges and pasturelands has been advocated by some people intermittently over the past two to three centuries. Not until the late 19th and early 20th centuries, however, was the need for controlling livestock grazing on native rangeland generally recognized.

Rangelands are receiving more attention now than ever before. They occupy vast areas of the earth's surface, and the increasing human population is pressing upon rangelands for many uses and products. Ranchers, land management agencies, conservation organizations, and the general public are constantly seeking information on management of these lands.

This bibliography is a compilation of publications that deal with some facet of grazing management systems, such as stocking strategies, rotation schemes, plant physiology, watershed, and animal production studies. The bibliography includes a few references that are more than 200 years old. Most of the references are from more recent scientific journals and experiment station publications of the United States and abroad, as well as from other governmental agencies and popular agricultural publications.
