Low sugar jam & jellies

NEW SURE-JELL® No-Sugar-Needed Jam Recipes

Made with Splenda

Strawberry Jam  Triple Berry Jam  Peach Jam

http://www.kraftfoods.com/surejell/sj_news.html
"Regular" pectin recipes required the amount of sugar listed with them in order to obtain a satisfactory gel, but there are four methods to produce low- and no-sugar jams and jellies.
Basic Unit of pectin: poly[α-(1→4)-D-galacturonic acid]. Blocks of this simple polymer alternate with "hairy," non-gelling regions containing side-chains with other unusual sugars.
• Jams and jellies made with traditional recipes using high amounts of sugar or by the first three methods listed for reduced sugar options will require a short process in a boiling water canner to be kept at room temperature in a sealed jar.
• Once opened, they all require refrigerated storage.
• Use of specially modified pectins. These pectins are labeled as "light," "less sugar needed," or "no sugar needed."

• The box of packaged pectins will come with recipes that give options for using no sugar, less sugar, or sugar substitutes.

• Using these pectin-added methods allows you to store your reduced-sugar product at room temperature.
• Another method is using regular pectin with special recipes.
• Some tested recipes are formulated so that the gel forms with regular pectin without needing to add the usual amount of sugar.
• Remember that there is some sugar in the regular pectin. These recipes often use sugar substitutes for additional sweetening.
• A long-boil method can be used to make no- or low-sugar jams.
• The fruit pulp is boiled until it thickens and resembles a jam, but these spreads will not be true jams with pectin gels.
• Sugar substitutes can be added to taste for sweetening these products.
• Some recipes that use gelatin as the thickening agent in jams and jellies.
• This method allows you to control the amount of sugar that is added to the product.
• These spreads usually have the sugars from fruit juices that are used for the flavoring and sugar substitutes for sweetness.
• Jellied products thickened with gelatin will require refrigeration
• Low Sugar Alternatives for Jams and Jellies
