

Think Trees NM is proud to announce a Webinar Event:

January 21, 2021
1:00-3:00 MST

Simplifying tree pruning: learn it, communicate it, sell it.

Presented by, Ed Gilman

Pruning live branches can have a dramatic impact on how trees respond to gravity, wind, and storms. Structural pruning, designed to reduce growth rate and weight on the largest branches, is the most effective method of minimizing damage. It starts when trees are planted and continues through maturity. We'll show you how to make your case to the customer, and how to communicate that to the crew using the latest arborist tools.

ONLY \$35

You can find registration information on the
Think Trees NM website @ www.thinktreesnm.org
or use this link to go directly to the WHOVA website and register
https://whova.com/portal/registration/egtps_202101/
If you do not have a WHOVA account, you will need to create one.
